

EVERYDAY MONEY PLANNING

FlowLedger User Guide

A clear daily routine for your Dashboard, Activity, Forecast, debt plan, savings, and Flo.

Dashboard > Today's Decisions > Activity > Forecast

Important: FlowLedger plans and tracks your money. It does not send payments. Continue paying through your bank or provider.

Mobile PWA + website | Updated August 2026

1. Start with a complete plan

The daily numbers are most useful after your recurring money is set up once and reviewed whenever life changes.

SETUP CHECKLIST

- Add or connect the checking account you use for everyday cash flow.
- Add recurring income and confirm each expected payday.
- Add bills with the correct amount, due date, and frequency: weekly, monthly, quarterly, or another supported schedule.
- Add debts with the current balance, minimum payment, APR, and due date.
- Add savings accounts and give each one a clear purpose name.
- Open Forecast and confirm that the next two weeks look like real life.

CONNECTED ACCOUNTS

Bank connections may not supply every debt minimum or may update pending activity later. Review connected balances and fill in missing plan details.

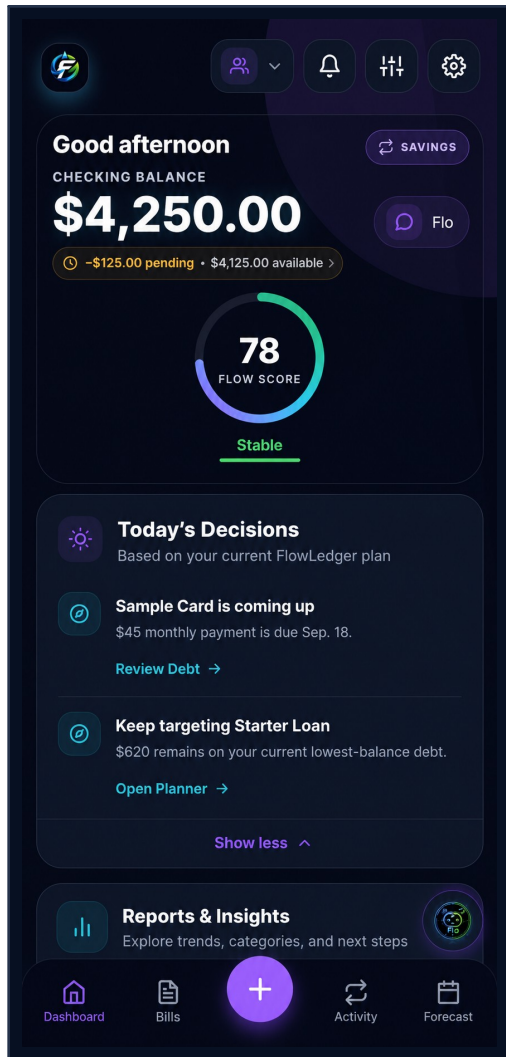

Example plan values; your household will be different.

One shared plan

The PWA and website use the same household data and background calculations. The layout changes to fit the screen.

2. Your daily 3-minute routine

Use the same short path each day. You only need to go deeper when something changed or needs review.

Dashboard and Today's Decisions.

1

Dashboard

Check checking balance, pending outflows, available amount, and Flow Score.

2

Today's Decisions

Handle the few bills, debts, or plan choices that matter now.

3

Activity

Review new transactions, matches, and anything that needs attention.

4

Forecast

Scan the next several days and confirm the projected daily close still makes sense.

IF THE DAY LOOKS NORMAL

You are done. If something looks unfamiliar, open the related item before changing the plan.

Keep it simple

Dashboard > Today's Decisions > Activity > Forecast is the everyday routine.

3. Bills, debts, and planned payments

Use Bills for recurring obligations. Switch to Debt when you want to manage balances, minimums, or payoff order.

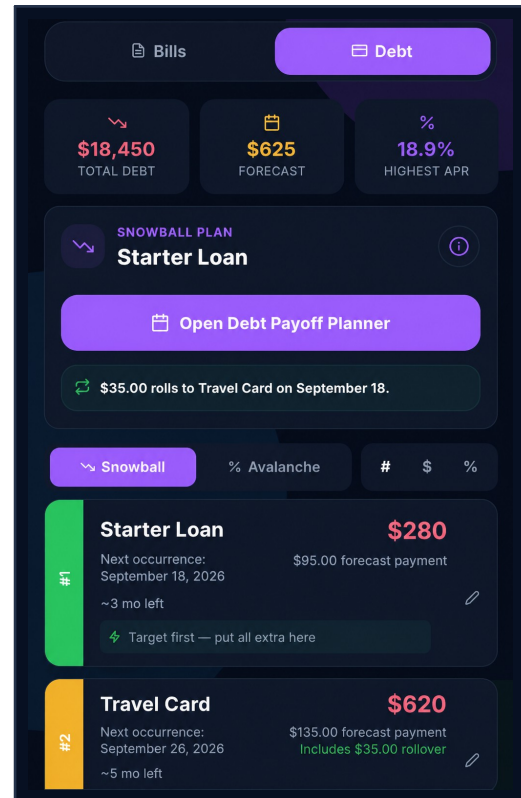

BILLS

- Add or edit the amount, next date, and frequency.
- Mark a bill paid when it was paid outside a connected account.
- Close or remove an item that no longer applies.

DEBT PAYOFF PLANNER

- See the current debt order and required payments.
- Review snowball rollover when a debt needs less than its planned source payment.
- Edit a planned payment when the amount or timing does not fit.
- Paid-off or closed debts should not create future reminders or planned occurrences.

A planned payment changes FlowLedger's forecast. It does not edit a payment at your bank.

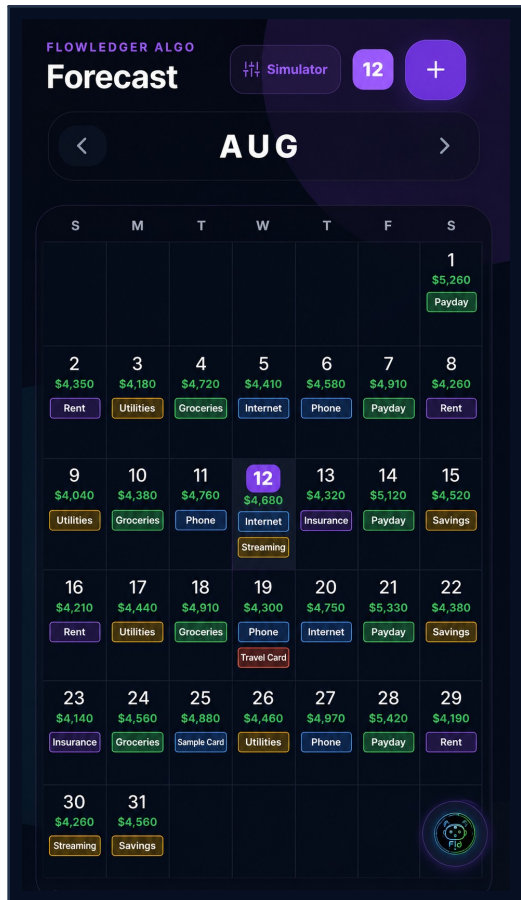

Debt view and the Debt Payoff Planner entry.

Matched pending payments

When a planned item matches a pending bank transaction, the calendar should show one Payment Pending item - not two charges.

4. Forecast and Plan Simulator

Forecast is the place to verify when money is expected to move and what each day's projected close will be.

Forecast calendar with daily projected closes.

READ THE CALENDAR

- Green items are inflows; outflows appear in their bill or debt colors.
- Tap a day to review the items behind its projected close.
- Pending, matched payments should appear once with their current status.
- Bank sync itself is not a calendar cash event.

TRY A WHAT-IF

Open **Simulator** to test a change in income, a temporary expense, or another supported plan adjustment without changing live data.

- Compare the real plan with the simulated result.
- Exit the simulator to return to the unchanged Forecast.

Treat a simulation as a preview, not an applied change.

Best habit

Before the day ends, make sure the next few projected closes match what you expect to happen.

5. Savings and Flo

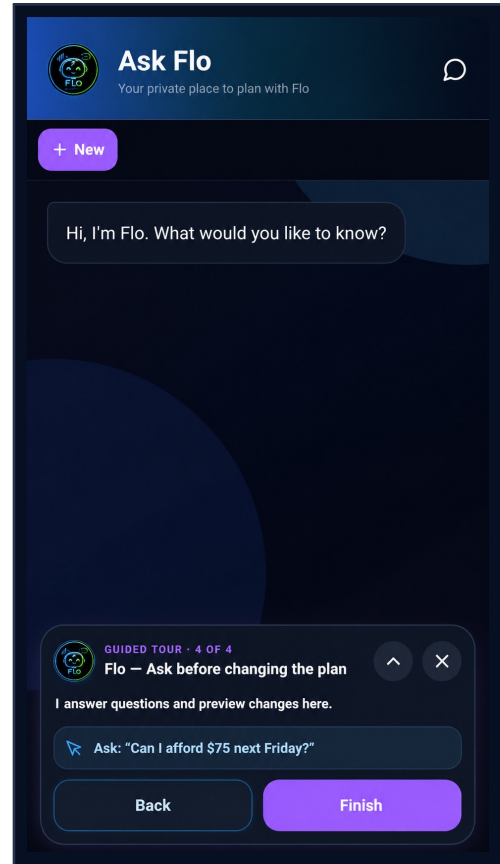

Use savings for purpose-based balances. Use Flo when you want an explanation or a guided next step.

SAVINGS

- Tap Savings on the Dashboard to flip the full balance card.
- Review each savings account separately.
- Give each account a purpose name such as Emergency Fund, Vacation, Taxes, or Car Repair.
- Tap again to return to checking and the Flow Score.

ASK FLO

- Ask what bills are due, which transactions changed the plan, or what needs review.
- Use the sources and freshness information when Flo shows them.
- Review any proposed plan change before confirming it.
- Press and hold the floating Flo icon to hide it for the current session. Use Undo to bring it back.

Flo opens as a private place to ask about the plan.

Naming only

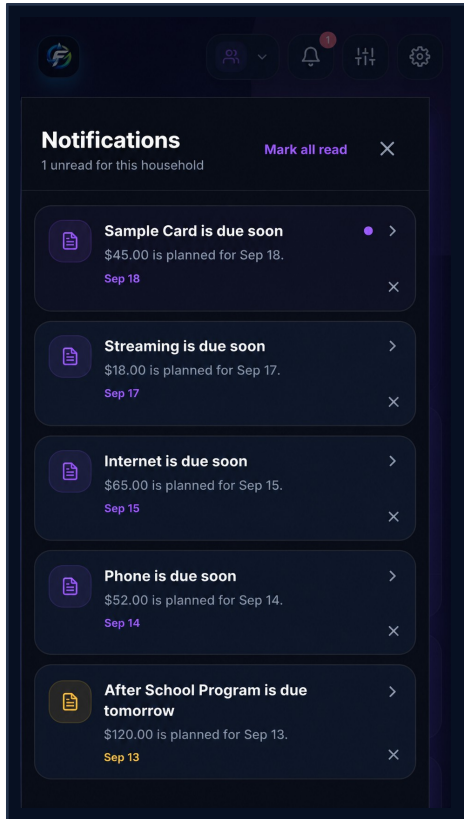

Renaming a savings account in FlowLedger does not rename it at the bank.

Ask, then verify

Flo may explain data or draft supported plan changes. Review important amounts before acting.

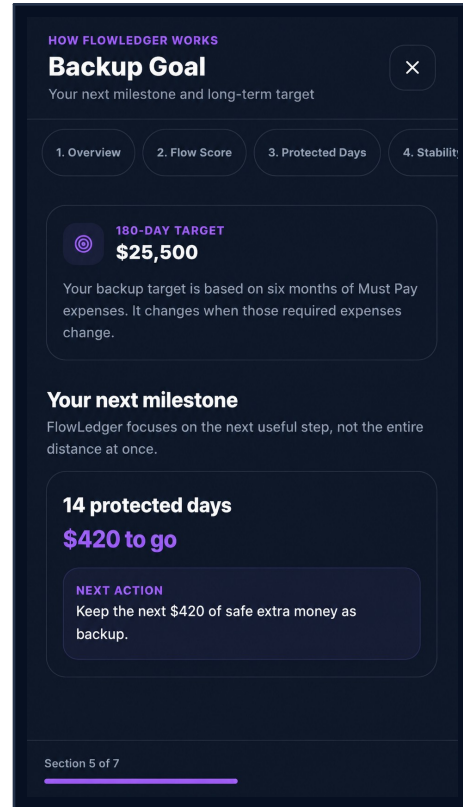

6. Notifications and in-app guidance

Use reminders to catch upcoming items, and use How It Works whenever you want a quick refresher.

Notifications group upcoming items that may need review.

Open a notification to review the related item. Dismiss it when it no longer needs attention.

How It Works explains one section at a time.

The guide starts at Step 1. Next and Previous move the highlighted step and each new page begins at the top.

Keep reminders accurate

If a bill or debt is closed, paid off, or no longer active, update it so it stops creating future reminders.

7. When a number does not look right

Start with the item's status and schedule. Most differences come from pending activity, a changed recurrence, an unmatched transaction, or stale connected data.

1	Refresh Refresh the app and allow connected accounts time to sync.
2	Check status See whether the transaction is pending, posted, matched, or still needs review.
3	Check recurrence Confirm the amount, next date, and weekly, monthly, quarterly, or other frequency.
4	Check active state Confirm that a bill or debt is active - and close it if it is finished.
5	Review Activity Look for unmatched or duplicate-looking items before changing a balance.
6	Verify debt details Confirm current balance and minimum payment when the bank did not provide them.
7	Recheck Forecast Open the affected day and verify the projected close after the data is corrected.

QUICK GLOSSARY

Pending

Expected activity that has not fully posted or settled yet.

Available

The balance FlowLedger shows after relevant pending outflows.

Flow Score

A health signal based on the current FlowLedger plan.

Projected close

The balance expected at the end of a Forecast day.

Remember the routine

Dashboard > Today's Decisions > Activity > Forecast. If those four areas look right, your everyday review is complete.

Screenshots in this guide show example household values. Names, balances, dates, and available features can differ by account and plan.
